

Using Voalte Phones Inside Isolation Rooms

Take the Voalte phone out of your pocket prior to entering room.

- You cannot reach into your pocket when in an isolation room.
- Place phone on the counter for use.

1

If you need to answer the phone, place it on speaker – NEVER put a contaminated phone or glove up to your face.

- You need to alert the caller that they are on speaker due to you being in an isolation room and to not use any patient identifiers, so HIPAA is not violated.

2

Because the phone is dirty, you need to remove gloves, complete hand hygiene, don a new pair of gloves after using the phone and prior to touching the patient.

3

Upon exiting the room, use a sanitizing wipe to disinfect the phone.

- The phone must be dry before placing it back into your pocket for proper sanitizing to occur.
